# Dual-in-Line DIL/DIP Reed Relays

# Series 97 (Hg)

### **Mercury Wetted Relays for Specialised Applications**

- Up to 50 W switching
- Encapsulated in a plastic package with internal mu-metal magnetic screen
- 1 Form A switch configuration
- Mercury wetted switches have the same pin configuration and footprint as the dry versions
- 5, 12 or 24 V coils with or without internal diode
- Additional build options are available
- Many benefits compared to industry standard relays (see last page)

The Series 97 is a range of reed relays with pins in the popular Dual-in-Line format.

Being encapsulated in a plastic package using a very high resistivity epoxy resin gives the device several advantages over the more usual moulded construction. The reed switches are not subjected to the high temperatures and pressures of the transfer moulding process with the inherent risk of damage to the sensitive glass to metal seals.

If higher coil resistance levels are required, please look at our Series 98 DIL relays which may be driven directly from 74HC or 74HCT CMOS logic.

### Switch Ratings - Mercury Wetted Switches

**SSUE 1.0 JUL 2024** 

### **Operating Voltages**

| Coil voltage - nominal | Must operate voltage - maximum at 25 °C | Must release voltage - minimum at 25 °C |
|------------------------|---|---|
| 5 V                    | 3.75 V                                  | 0.5 V                                   |
| 12 V                   | 9 V                                     | 1.2 V                                   |
| 24 V                   | 18 V                                    | 2.4 V                                   |

### **Environmental Specification/Mechanical Characteristics**

In the table below, the upper temperature limit can be extended to +125 °C if the coil drive voltage is increased to accommodate the resistance/temperature coefficient of the copper coil winding. This is approximately 0.4% per °C. This means that at 125 °C the coil drive voltage will need to be increased by approximately 40 x 0.4 =16% to maintain the required magnetic drive level. Please contact sales@pickeringrelay.com for assistance.

| Operating Temperature Range                        | -20 °C to +85 °C  |
|--|-------------------|
| Storage Temperature Range                          | -35 °C to +100 °C |
| Shock Resistance                                   | 50 g              |
| Vibration Resistance (10 - 2000 Hz)                | 20 g              |
| Soldering Temperature (max) (10 s max)             | 270 °C            |
| Washability (Proper drying process is recommended) | Fully Sealed      |

### Washing Guidelines

Pickering do not make any specific recommendations on washing reed relays, due to the large number of factors in cleaning processes, however we do have suggestions on best practices. Click here for more information.

### **Mercury Relays**

Mercury relays no longer form part of our standard range due to ROHS guidelines, although some exceptions may apply. For more information please visit pickeringrelay.com/mercuryreedrelays, email techsales@pickeringrelay.com, or call +44 (0) 1255 428141.

PRODUC

### **Mercury Reed Relays**

Mercury relays should be mounted vertically with pin 1 uppermost.

### Mercury Reed: Series 97 switch ratings - contact ratings for each switch type

| Switch<br>No | Switch<br>form | Power<br>rating | Max.<br>switch<br>current | Max.<br>carry<br>current | Max.<br>switching<br>volts | Life expectancy<br>ops typical<br>(see Note <sup>1</sup> ) | Special<br>features |
|--------------|----------------|-----------------|---------------------------|--------------------------|----------------------------|--|---------------------|
| 6            | А              | 50 W            | 2 A                       | 3 A                      | 500                        | 10 <sup>8</sup>  | Standard Mercury    |

#### Note<sup>1</sup>: Life Expectancy

The life of a reed relay depends upon the switch load and end of life criteria. For example, for an 'end of life' contact resistance specification of  $1\Omega$ , switching low loads (10 V at 10 mA resistive) or when 'cold' switching, typical life is approx  $1 \times 10^9$  ops. At the maximum load (resistive), typical life is  $1 \times 10^7$  ops. In the event of abusive conditions, e.g. high currents due to capacitive inrushes, this figure reduces considerably. Pickering will be pleased to perform life testing with any particular load condition.

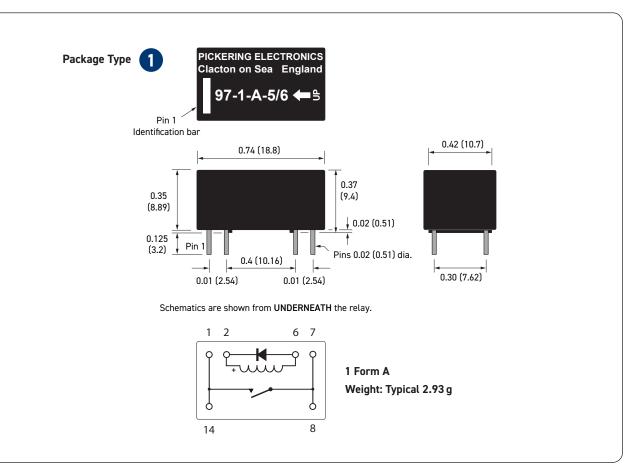

### Mercury Relay: Series 97 Coil data and type numbers (All relays Package Type 1)

| Device Type    | Type Number<br>Series 97 | Coil (V) | Coil<br>resistance | Max.<br>contact<br>resistance<br>(initial) |
|----------------|--------------------------|----------|--------------------|--|
| 1 Form A       | 97-1-A-5/6D              | 5        | 140 Ω              |  |
| Switch No. 6   | 97-1-A-12/6D             | 12       | 500 Ω              | 0.075 Ω                                    |
| Package Type 1 | 97-1-A-24/6D             | 24       | 1500 Ω             |  |

When an internal diode is required, the suffix D is added to the part number as shown in the table.

## Specification

### Pin Configuration, Weights and Dimensional Data (dimensions in inches, millimeters in brackets)

**Important:** Where the optional internal diode is fitted, the correct coil polarity must be observed as shown by the + symbol on the schematic.

The technical information shown in this data sheet could contain inaccuracies or typographical errors. This information may be periodically changed or updated and these changes will be included in future versions of this data sheet.

For different values, latest specifications and product details, please contact your local Pickering sales office.

### Similar Relays Comparison

If the Series 97 is unsuitable for your application, Pickering also manufactures another series of reed relays with similar characteristics, but in a different package size.

| Serie   | es Name                      |     | 97-1-A        |                   | 97-2-A        | 97-1-B        | 97-1-C        |               | 98- | 1-A |                   | 98-        | -2-A              | 98-1-B        | 98-1-C |

### **Reed Relay Selection Tool**

Because Pickering offer the largest range of high-quality reed relays, sometimes it can be difficult to find the right reed relay you require. That is why we created the Reed Relay Selector, this tool will help you narrow down our offering to get you the correct reed relay for your application. To try the tool today go to: pickeringrelay.com/reed-relay-selector-tool

### **Standard Build Options**

The Series 97 Reed Relays are available with a number of standard build options to tailor them to your specific application. These options are detailed in the table below. If you decide to go ahead and specify one, or more, of these options you will be allocated a unique part number suffix.

| Mechanical Build Options                              | Electrical Build Options                                       |  |  |
|---|--|--|--|
| Special pin configurations or pin lengths             | Different coil resistance                                      |  |  |
| Special print with customer's own part number or logo | Operate or de-operate time                                     |  |  |
| Custom packaging                                      | Pulse capability   |  |  |
| Equivalents to competitors discontinued parts         | Enhanced specifications  |  |  |
|   | Equivalents to competitors discontinued parts                  |  |  |
|   | Non-standard coil voltages and resistance figures              |  |  |
|   | Special Life testing under customer's specific load conditions |  |  |
|   | Specific environmental requirements                            |  |  |

### Customization

If your specific requirements are not met by standard relay, or any of the standard build options, please speak to us to discuss producing a customized reed relay to service your specific application: pickeringrelay.com/contact

### **3D Models**

Interactive 3D models of the complete range of Pickering relay products in STEP, IGS and SLDPRT formats can be downloaded from the website: pickeringrelay.com/3d-models

| Part Number Description:                | 97 - 1 - A - 5 / 6 D - xxx |

## 10 Key Benefits of Pickering Reed Relays

|  |   | -   |  |
|--|---|---|--|
| Key Benefit  | Pickering Reed Relays   | Typical Industry Reed Relays  |  |
| 1<br>Instrumentation Grade<br>Reed Switches                | Instrumentation Grade Reed Switches<br>with vacuum sputtered Ruthenium<br>plating to ensure stable, long life up to<br>5x10E9 operations.   | Often low grade Reed Switches with<br>electroplated Rhodium plating resulting<br>in higher, less stable contact resistance.   |  |
| 2<br>Formerless Coil<br>Construction                       | Formerless coil construction increases<br>the coil winding volume, maximizing<br>magnetic efficiency, allowing the use of<br>less sensitive reed switches resulting in<br>optimal switching action and extended<br>lifetime at operational extremes.                                      | Use of bobbins decreases the coil<br>winding volume, resulting in having<br>less magnetic drive and a need to use<br>more sensitive reed switches which<br>are inherently less stable with greatly<br>reduced restoring forces.   | Pickering former-less coil Typical industry coil wound on bobbin |
| 3<br>Magnetic Screening                                    | Mu-metal magnetic screening (either<br>external or internal), enables ultra-high<br>PCB side-by-side packing densities with<br>minimal magnetic interaction, saving<br>significant cost and space. <b>Pickering</b><br><b>Mu-Metal magnetic screen - interaction</b><br><b>approx. 5%</b> | Lower cost reed relays have minimal<br>or no magnetic screening, resulting in<br>magnetic interaction issues causing<br>changes in operating and release<br>voltages, timing and contact resistance,<br>causing switches to not operate at their<br>nominal voltages. <b>Typical industry</b><br>screen - interaction approx. 30% | X-Ray of Pickering<br>mu-metal<br>magnetic screen                |
| <b>4</b><br>SoftCenter™<br>Technology                      | <b>SoftCenter</b> <sup>™</sup> technology, provides maximum cushioned protection of the reed switch, minimising internal lifetime stresses and extending the working life and contact stability.  | Transfer moulded reed relays (produced<br>using high temperature/pressure),<br>result in significant stresses to the glass<br>reed switch which can cause the switch<br>blades to deflect or misalign leading to<br>changes in the operating characteristics,<br>contact resistance stability and operating<br>lifetime.          | Pickering<br>soft center<br>protection of<br>the reed switch     |
| 5<br>100% Dynamic<br>Testing                               | 100% testing for all operating<br>parameters including dynamic contact<br>wave-shape analysis with full data<br>scrutiny to maintain consistency.   | Simple dc testing or just batch testing<br>which may result in non-operational<br>devices being supplied.   | Dynamic Contact Resistance Test                                  |
| 6<br>100% Inspection<br>at Every Stage of<br>Manufacturing | Inspection at every stage of manufacturing maintaining high levels of quality.  | Often limited batch inspection.   |  |
| 7<br>100% Thermal<br>Cycling                               | Stress testing of the manufacturing<br>processes, from -20 °C to +85 °C to<br>-20 °C, repeated 3 times.   | Rarely included resulting in field failures.  | +85°C  |
| 8<br>Flexible<br>Manufacturing<br>Process                  | Flexible manufacturing processes allow quick-turn manufacturing of small batches.   | Mass production: Usually large<br>batch sizes and with no quick-turn<br>manufacturing.  | FAST   |
| 9<br>Custom Reed Relays                                    | Our reed relays can be customized<br>easily, e.g. special pin configurations,<br>enhanced specifications, non-standard<br>coil or resistance figures, special life<br>testing, low capacitance, and more.   | Limited ability to customize.   |  |
| 10<br>Product Longevity                                    | Pickering are committed to product<br>longevity; our reed relays are<br>manufactured and supported for<br>more than 25 years from introduction,<br>typically much longer.   | Most other manufacturers discontinue<br>parts when they reach a low sales<br>threshold; costing purchasing and R&D<br>a great deal of unnecessary time and<br>money to redesign and maintain supply.  | Product<br>25+Years<br>Longevity                                 |
